

Figure 1 consists of two graphs. The left graph shows the snow profile (積雪深) in cm on the y-axis (0 to 150) and snow quality (雪質) on the x-axis. The right graph shows hardness (硬度) in kPa on the y-axis (0 to 50) and ram hardness (ラム硬度 R) in kg on the x-axis (0 to 50). Both graphs show data points and trends over time.
